High profile apps for customers

**13+**

Years of market presence

**5+**

iOS apps developed using  
SwiftUI/ Composable architecture  
Android apps developed using  
Kotlin

**10+**

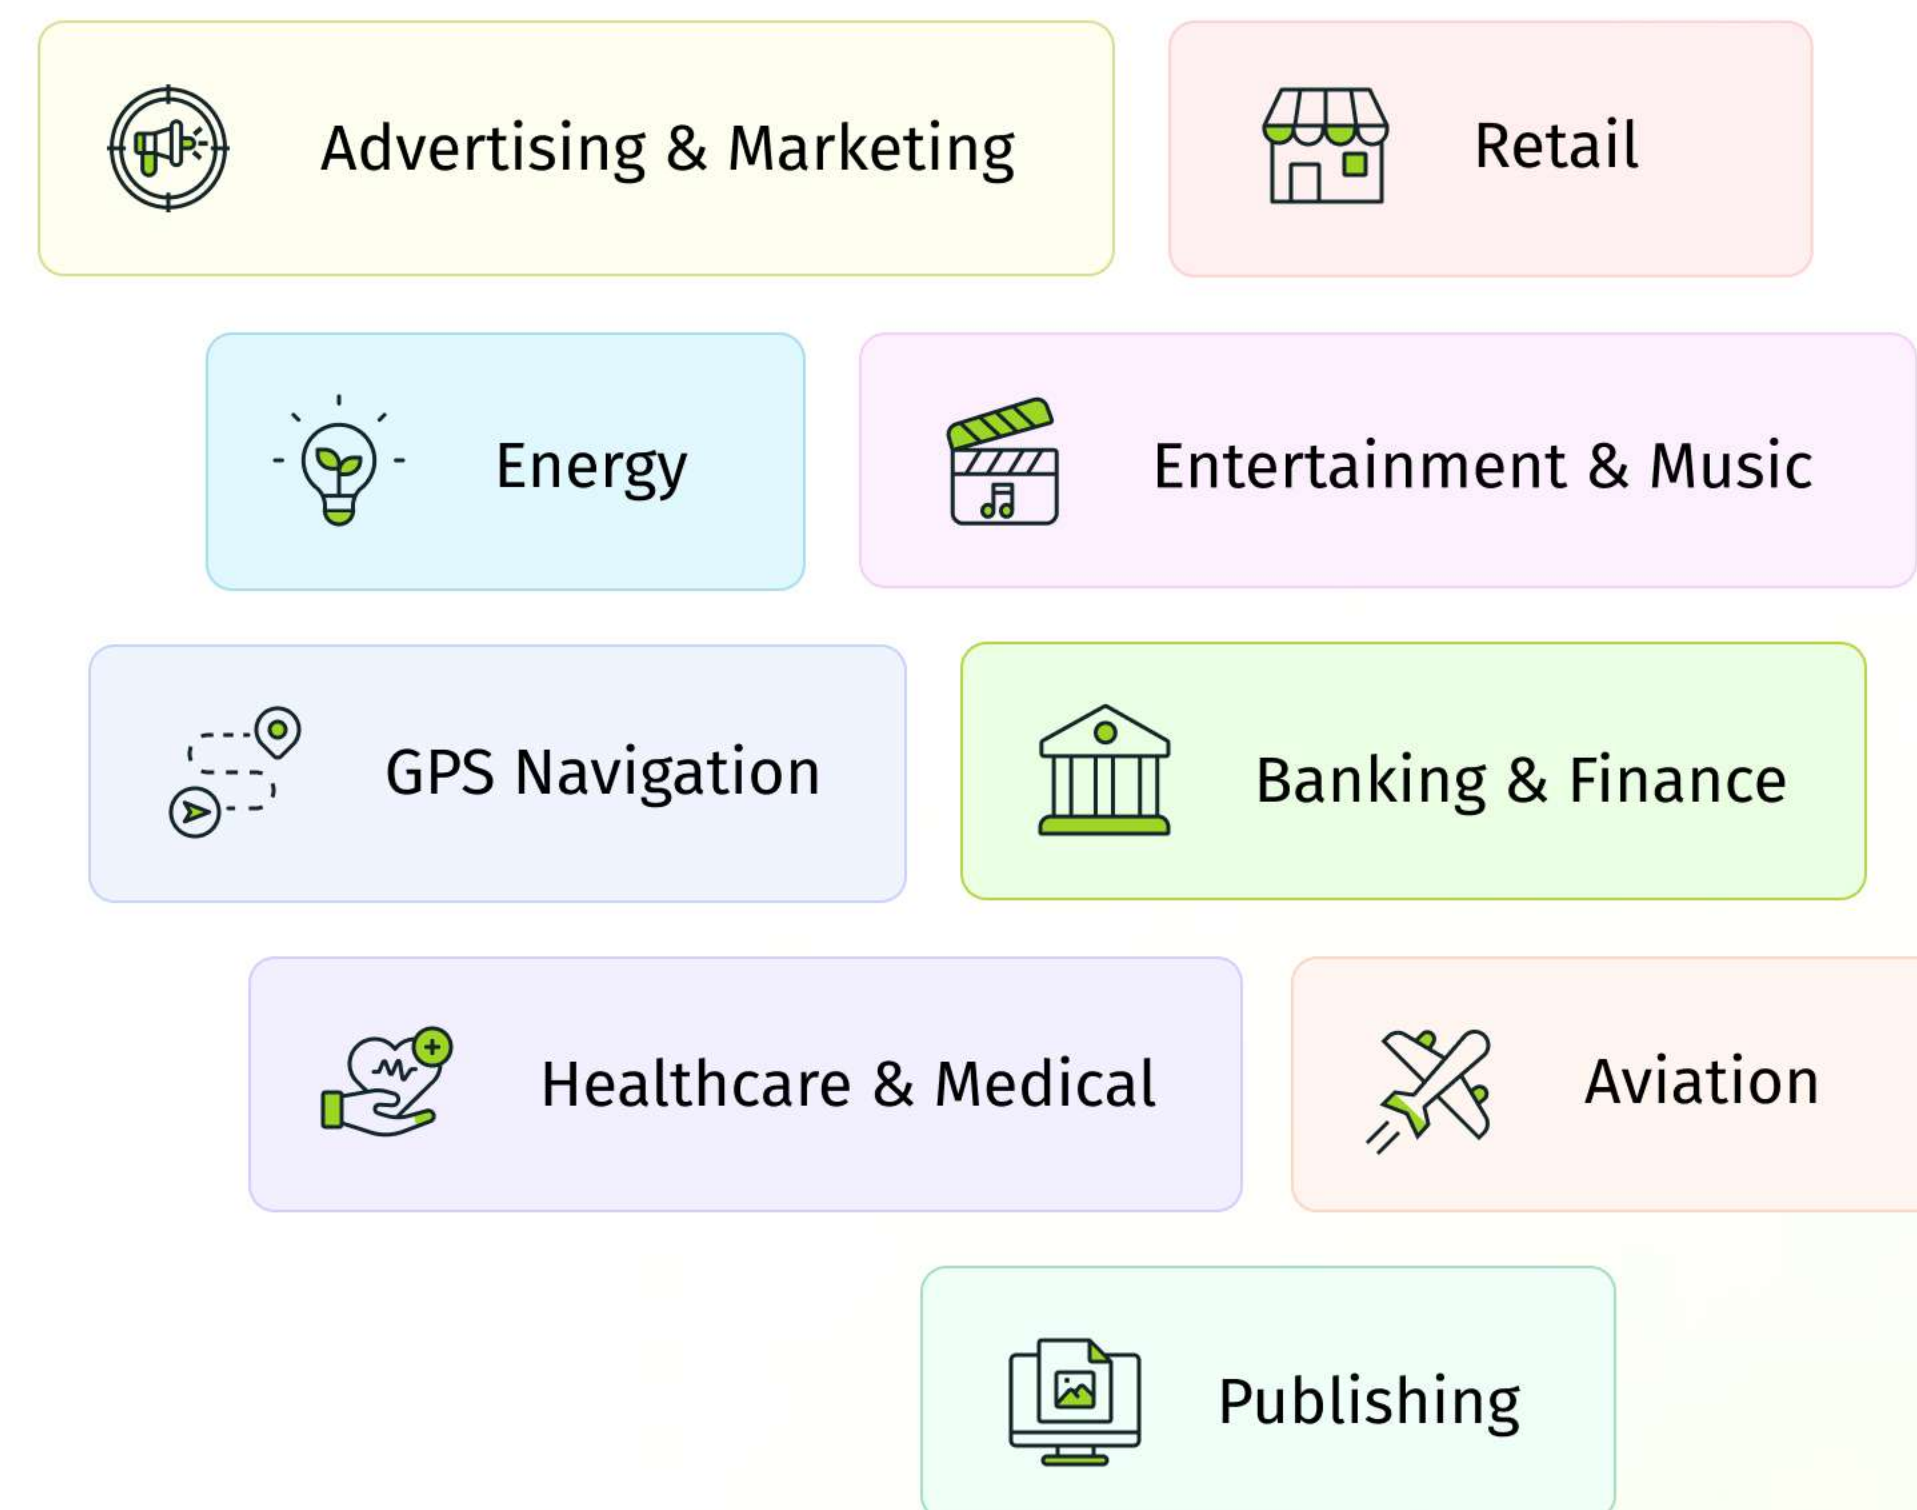

Fortune 500 clients

# Our Clients / Domains

## Clients

## Domains

## DESIGN

-  Concept discussion
-  User journey creation
-  Wireframe designing
-  User interface designing
-  Clickable prototype
-  Export for development

## DEVELOPMENT

-  Agile Methodology
-  Cutting-edge tools
-  Unit testing
-  Scalable design patterns
-  Adapts to all screens
-  All mobile platforms

## TESTING

-  Functional testing
-  Performance testing
-  Memory leakage testing
-  Alpha/Beta testing
-  Usability testing
-  Installation testing
-  Security testing

## DEPLOYMENT

-  Build And Release Automation
-  Automated CI/CD Pipelines
-  Identify Key Metrics
-  Develop Deployment Tracking
-  Monitor & Iterate

## Build an app

### Purpose

Discover, roadmap, design, prototype and then build your app using modern methods and technologies.

### Process

- ✓ Extensive workshopping to understand your needs and wants towards your existing products,
- ✓ Redesigning and rebuilding your product so it's as good as new, taking its place in the relevant app stores.
- ✓ Receive a polished and refreshed app that does what it's supposed to and is built with modern technologies to minimise or eliminate downtime.

## Prototyping

In conjunction with the discovery and design process, we'll mock up a prototype, produce something that can be used on a device for user testing, and gain immediate feedback on how everything slots together.

## Application Audit (MOT)

A full application audit to see where improvements can be made to an already live app.

- ✓ A full audit to check the scope for any improvement, suggestions etc.
  - ✓ Review code, tools, versions, 3rd parties plugins including UI and UX of the app.
  - ✓ A detailed report of everything that's working, everything that's not, and areas of improvement.
- 

## Technical Strategy

- ✓ Strategise the next stage of the life cycle of your app.
  - ✓ Includes full recommendations on code quality, refactoring, or rebuilding your product.
- 

## Accessibility Audit

- ✓ Taking your app and auditing it to ensure it meets the current accessibility guidelines and regulation based on the country.

# Case Studies

Evangelist Apps delivered a high-quality app that was quickly regarded as a market-leading app, driving more business for the client and surpassing expectations. The team was communicative, supportive, collaborative, and easy to work with, and their native app development knowledge was impressive.

**FridaySolved.**

**Ryan Hall**

Managing Director, Friday Solved

Evangelist Apps corrected the UX of VoIP meetings depending on user settings. Evangelist Apps met the client's requirements and delivered work on time. The team was helpful and quick to respond when the client needed to communicate. Evangelist Apps was efficient, talented, and resourceful.

**Third Bridge**▲

**Chris Land**

ThirdBridge

With the new application, a process that used to take 20–30 minutes has been cut down to less than two minutes. The client's employees are now able to work remotely and are no longer tied to the store. The client has been impressed with the structure and project management of Evangelist Apps.

**Miakel Wennberg**

Digital Transformation Lead, Hastens

Evangelist Apps was able to gather requirements, propose UX designs, and deliver a proof of concept in 2 stages. The team completed the project in 6 months and there were no issues found during the testing phase. The team has great communication and project management throughout the collaboration.

**Jyoti Bhatt**

CEO, ImpactQA
